

Have You Had a Concussion in the Past 5 Years?

ImTAB

Research Study Investigates Concussion and Brain Health in Older Adults 65+

Research Goals:

Investigate how structural changes in the brain correlate to cognitive decline

Collect and analyze fluid biomarkers for the detection of inflammation and Alzheimer's disease-related risk factors

Examine the relationship between concussion and the aging process

Participants will receive:

- Snacks and refreshments
- Medical screening; neurological exam
- Optional review of cognitive assessment scores with investigator after completion of 1 year follow-up visit
