Volunteers needed for Lung Research

What We Do:

We are examining the effects of heavy alcohol and tobacco use on the development of pneumonia and serious pulmonary disease.

The purpose of this study is to figure out how substances from inside the lung work in cigarette smokers with heavy alcohol use, compared to cigarette smokers and non-smokers who do not drink heavily.

Am I Eligible?

- Volunteers should be between ages 30-55
- Cigarette smokers or non-smokers
- No history of heavy alcohol or recreational drug abuse.
- No chronic medical conditions

What's Involved?

- Thorough pulmonary evaluation by a lung physician by physical exam, chest x-ray, spirometry, and bronchoscopy
- Routine blood lab work & pregnancy test will be performed
- Compensation provided

Dr. Ellen Burnham  COMIRB Protocol 12-0181  Colorado Pulmonary Alcohol Research Collaborative (CoPARC)
