

# Research about a birth control pill for emergency contraception

- Are you interested in how your body works, specifically regarding ovulation?
- Are you a healthy female between the ages of 18-35?

## Participation will:

- Last up to 6 weeks and consist of visits around the time of ovulation.
- Include taking a single dose of the oral contraceptive, Drospirenone.

## Participant will:

- Come to clinic for transvaginal ultrasounds and blood draws every other day around the time of ovulation and then daily for up to 7 days following administration of Drospirenone.

## Compensation:

- Up to \$300 for all study procedures
