BASSINET Study

Baby Adiposity Studies of the Intrauterine
Effect of Triglycerides

**Research Subjects
Needed to
Participate in a
Study about
Nutrition in
Pregnant Women**

Are You in Your First Trimester of Pregnancy?

Who Can Join the Study?

Highly motivated pregnant women who:

- Are between 21-39 years old
- Are less than 16 weeks pregnant
- Are willing and able to complete home blood tests
- Do not have gestational diabetes or high blood pressure
- Are nonsmokers

What Happens If I Join the Study?

- You will have 4 study visits during pregnancy and 1 study visit after your baby is born
- You will be asked to prick your finger to monitor blood sugar and blood triglyceride levels 4 times a day for 4 days after each visit (total of 64 finger pokes)
- We will measure you and your infant's body composition at about 1-2 weeks of life
- You will be asked to complete several questionnaires about your pregnancy and general health
- Financial compensation for participation will be given
