

Study: *Were you recently diagnosed with Type 1 or Type 2 Diabetes?*

The **COVID and Diabetes Assessment** study's goal is to gain a deeper understanding of the **link between COVID-19 and diabetes**. This study will observe patients recently diagnosed with diabetes who have and have not had recent COVID-19. Some studies have suggested that infection with COVID-19 may result in a higher risk of developing both Type 1 diabetes (T1D) and Type 2 diabetes (T2D), and also make diabetes progress more rapidly. This study will help us to better understand these issues.

**YOU
MIGHT BE
ELIGIBLE IF**

Diagnosed with diabetes in the past 3 months

Adults or children age 11 years or older

Had COVID-19 in the past year ... or no COVID-19 in the past year

This study will take place at 15 sites across the country. The study will enroll about 1,600 patients who will be surveyed by phone, online or in person and will provide regular blood samples. Participants will be followed for two years, and must be willing to travel to a study site to complete the six (6) study visits. To find out more, contact Ryan.Shoemaker@CUAnschutz.edu or visit the study's website at covid diabetesstudy.org.
