

RESEARCH ABOUT THE POTENTIAL FOR THE CONTRACEPTIVE IMPLANT AS EMERGENCY CONTRACEPTION

ARE YOU INTERESTED IN STARTING NEXPLANON®, HORMONAL BIRTH CONTROL THAT GOES IN YOUR ARM?

Participation will:

- Last up to 6 weeks and consist of visits around the time of ovulation.
- Include insertion of a birth control implant containing etonogestrel.

Participants will:

- Come to clinic for transvaginal ultrasounds and blood draws several days around the time of ovulation.
- Have implant placed prior to ovulation and then daily visits will occur for up to 7 days.

Are you a healthy female between the ages of 18-40?

Are you interested in how your body works, specifically in regard to ovulation?

Study duration: Up to 6 weeks

Compensation: Up to \$600
